SUMMARY

Developer pursuing an **M.S. in Artificial Intelligence**, with frontend web development experience at Vanguard and Infosys and a focus on **AI agents and orchestration**. Builder of **Igris AI Commander**, a Telegram-based AI agent orchestrator with human-in-the-loop safety guardrails (Kaggle / Google AI Agents Intensive capstone). Completed Anthropic's **Claude 101** and **AI Fluency** courses. Interested in building practical, safe, and explainable AI systems.

TECHNICAL SKILLS

Frontend: React.js, JavaScript, HTML, CSS

AI & Agents: AI agents, agent orchestration, human-in-the-loop workflows, prompt engineering, tool use, task decomposition, local LLMs (Ollama / gemma3)

Backend & Automation: Node.js, TypeScript, Telegram Bot API, Gmail API, OAuth 2.0, Playwright (browser automation)

Tools & Practices: Git, GitHub, Google Antigravity, PM2, VS Code, Agile / Scrum

EXPERIENCE

Junior Frontend Developer — Vanguard, Malvern, PA

Aug 2024 – Sep 2025

Frontend contributions to a financial web application

- Built and updated user interface components on a financial web application using **React.js, JavaScript, HTML, and CSS**.
- Collaborated with developers in an **Agile** team on feature work and defect fixes, managing code in **Git**.

Software Development Intern — Infosys, Bengaluru, India

Mar 2022 – Dec 2022

Internship — frontend web development on a legacy application modernization effort

- Built and modified UI components using **React.js, HTML, CSS, and JavaScript** as part of a legacy application modernization effort.
- Identified and fixed UI and functionality defects during feature testing, and used **Git** for version control within an Agile team.

PROJECTS

Igris AI Commander — Personal AI Agent Orchestrator

Kaggle / Google AI Agents Intensive — Vibe Coding Capstone (Concierge Agents track) · github.com/rameshio/igris-ai-commander-capstone

- Built a **Telegram-based personal AI agent orchestrator** that manages Gmail summaries, job scouting, and approvals from a single control center.
- Engineered a **human-in-the-loop approval layer** so sensitive or destructive actions — sending emails, applying to jobs, deleting or archiving — require explicit confirmation before running.
- Developed in **Node.js / TypeScript** using the **Telegram Bot API, Gmail API / OAuth, Playwright** for browser automation, and a local **Ollama (gemma3:4b)** model, running under **PM2**.
- Structured the project into skills, specs, policies, tests, and eval folders, with documentation and a capstone report so its behavior is testable and easy to understand.

EDUCATION

M.S. in Artificial Intelligence — Southwest Baptist University, Bolivar, MO

Jan 2026 – Present

M.S. in Information Technology Management — Concordia University, St. Paul, MN

Jan 2023 – May 2024

CERTIFICATIONS

Anthropic — Claude 101 · AI Fluency: Framework & Foundations (2026)
