SUMMARY:

SUMMARY

I have 4+ years of experience in Java full stack development, working with Spring Boot, React.js, Microservices, and REST APIs. I worked on developing and maintaining scalable web applications and backend services. Currently, I am learning and exploring AI Agents, MCP, and automation workflows.

EDUCATION:

Concordia University, St. Paul, Master of Science in Information Technology Management

Southwest Baptist University, Bolivar, MO, Master of Science in Artificial Intelligence

TECHNICAL SKILLS:

Programming Languages: Java, Python, C++, SQL, JavaScript, TypeScript, HTML5, CSS3

Backend Development: Spring Boot, Spring Framework, Spring Microservices, REST APIs, Microservices Architecture

Frontend Development: React.js, Angular, Responsive Web Design

Cloud & DevOps: AWS, Microsoft Azure, Docker, Kubernetes, Jenkins, CI/CD, Git, GitHub

APIs & Integration: REST APIs, API Integration, Distributed Systems

AI & Automation: AI Agents, MCP (Model Context Protocol), Workflow Automation, AI Orchestration, Prompt Engineering, LLM Integrations

Tools & Platforms: VS Code, Postman, Make.com, Slack Integrations

Software Development Practices: Agile Methodology, SDLC, Debugging, Problem Solving, System Design Basics

PROFESSIONAL EXPERIENCE:

Client: Fidelity Investments

Boston, United States

Java Developer

March 2024 – Dec 2025

Project Description:

Designed and developed scalable full-stack applications for a cloud-based financial platform, focusing on secure API services and responsive user interfaces. Built and maintained Spring Boot microservices with OAuth 2.0 authentication and integrated them with React-based frontend applications to deliver seamless user experiences. Implemented RESTful APIs to support high-volume transactions and optimized database performance using Oracle and MySQL. Leveraged Docker and Kubernetes for containerized deployments and automated CI/CD pipelines using Jenkins to ensure efficient and reliable releases.

Responsibilities:

- Developed and maintained **scalable full-stack applications** using React.js and Spring Boot.
- Built responsive and reusable UI components using **React**, improving usability and user experience.
- Designed and implemented secure **RESTful APIs** to support high-volume financial systems.
- Integrated frontend applications with backend microservices, ensuring seamless data flow across systems.
- Implemented **OAuth 2.0 and JWT-based authentication** to secure APIs and user access.
- Collaborated with product managers and designers to deliver user-focused features in an Agile environment.
- Containerized applications using **Docker** and deployed on **Kubernetes**, improving scalability and reliability.
- Automated CI/CD pipelines using **Jenkins and GitHub Actions**, reducing deployment time and improving release efficiency.
- Wrote and maintained unit and integration tests using **JUnit and Mockito**, ensuring high-quality code.
- Troubleshooted and resolved production issues, improving system stability and performance.

Client: Walmart

Bengaluru, India

Java/J2EE Developer

Nov 2021 – December 2022

Project Description:

Contributed to the development of Walmart Healthcare's Medicare platform by building scalable backend microservices and integrating distributed systems through RESTful APIs. Implemented real-time data processing using Kafka to improve system responsiveness and reliability. Collaborated with frontend teams to enable smooth API integration and enhance user workflows. Focused on optimizing backend performance and ensuring efficient handling of large-scale healthcare data.

Responsibilities:

- Developed backend microservices using **Spring Boot** to support healthcare platform functionalities.
- Built and consumed **REST APIs**, enabling seamless integration across distributed systems.
- Implemented **real-time data streaming** using Kafka to enhance system responsiveness.
- Collaborated with frontend teams to integrate APIs with UI applications and improve user workflows.
- Optimized backend processes and database queries to handle large-scale data efficiently.
- Participated in Agile ceremonies, code reviews, and testing to ensure high-quality deliverables.
- Debugged and resolved system issues to maintain application reliability.

Client: Infosys

Bengaluru, India

Software Engineer

June 2020 – Oct 2021

Project Description:

Worked on modernizing a legacy application by transitioning it to a microservices-based architecture using Spring Boot and React. Developed dynamic and responsive frontend components using React.js and integrated them with backend services to improve user experience. Built RESTful APIs and implemented secure authentication using OAuth 2.0. Enhanced system performance, scalability, and maintainability through continuous improvements and code optimizations.

Responsibilities:

- Contributed to building **full-stack applications** using React.js and Spring Boot.
- Developed responsive user interfaces using **React**, improving user interaction and experience.
- Built RESTful services and integrated them with frontend components.
- Assisted in migrating a monolithic application to a **microservices architecture**.
- Implemented secure authentication using **OAuth 2.0**.
- Wrote unit tests and performed debugging to ensure code quality and performance.
- Supported CI/CD pipelines using Jenkins and Maven.
